

## Assistive Listening System at St. Augustine Parish

The Assistive Listening System in our worship space sends the audio from our sound system over a wireless signal to any device with the “waveCAST” app installed on it. Anyone with Bluetooth capable hearing aids can make use of this, follow these instructions:

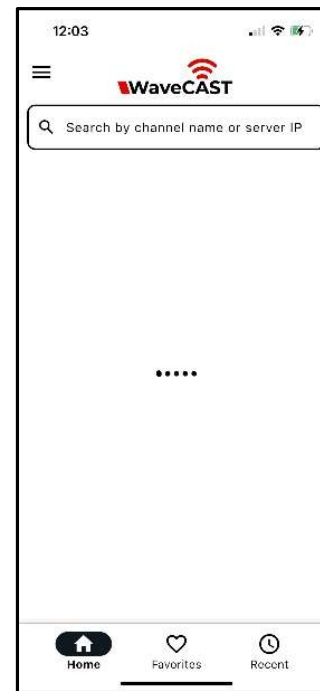

- Ensure your device has the “waveCAST” app installed, point your phone’s camera at the following QR code and tap the link that comes up and you will be redirected to the appropriate page to download this app onto your device

- (alternatively, open your phone’s app store and, using the search function, type in “wavecast” and the app with the following logo should come up. Download and install)

- Next, connect your device to the wifi network “St. Augustine’s Audio” and use the password: Blessed2026!
- Now, when you open the waveCAST app you will be greeted with a spinning wheel and then a screen similar to below:

Select the “St. Augustine’s Audio” option from the list.

You should see a volume control in the center of your screen, use this to control the volume of the audio coming from the sound system.

Connect any headphones or hearing aid devices to your device and you are now ready to go!

*Note: some android devices may require you to keep your screen on for continual listening.*
